Size of company: L

Field of activity: Green Energy, Green Resources, Green Efficiency, More Green

Section:

Komptech is a leading international technology provider of machines and systems for the mechanical and mechanical-biological treatment of solid waste and for the **treatment of woody biomass** as a renewable energy carrier.

The product range comprises more than 30 different types of machines, covering the essential process steps of modern waste treatment - crushing, separation / separation, biological treatment.

By combining the right products from our own program with the addition of well-proven components from well-known manufacturers, solutions for solving complex tasks arise

Always at the center of attention: **Innovative technology and solutions** , which guarantee maximum customer benefit.

Products & Services

Screen and separation technology

Drums, stellar sieves, wind chimes, ballistic separators

Shredding technology

Pre-shredder, universal crusher, post-shredder, hacker

composting technology

Converters, universal mixers

Success story

Green efficiency in waste treatment

The world market leader specializes in the mechanical and mechanical-biological treatment of solid waste as well as in the treatment of biomass as a renewable energy carrier.

KOMPTECH develops its machines according to the "green efficiency" principle - high efficiency with the lowest possible pollutant emissions. Behind them are spectacular solutions such as the new mechanical direct drive or the efficient drum drive.
