Size of company: L

Field of activity: More Green Tech

Section:

Perception Park provides solutions to enable the industry (mechanical engineering) to access molecular material properties.

For this, we offer data processing solutions that translate the complex information from hyperspectral cameras into a picture format that is comprehensible to humans and machines and thus can be processed automatically.

As a result, hyperspectral cameras such as conventional color cameras can be integrated. The colors provide information on the molecular composition of a material. Which molecular properties should be reproduced can be configured intuitively.

Producsz & Services

Perception System

By adapting a hyperspectral camera with a perception system, it expands to an easy to understand and intuitive chemical color camera (Chemical Color Camera)
