Size of company: S

Field of activity: More Green

Section:

Pro aqua Diamantelektroden Produktion GmbH produces boron-doped diamond electrodes as well as systems in which these electrodes are installed for (waste) water treatment.

Pro aqua Diamantelektroden Produktion GmbH has set itself the task of making world-wide standards for the production and the use of **diamond electrodes** for:

- Provision of clean water
- for drinking and swimming
- Provision of quality-assured liquid media for circulation
- Provision of purified wastewater for discharge into the environment
- Provision of know-how for technology development for the treatment of various liquids / media

Products & Services

Rainfresher

In the summer months, the use of rainwater is often problematic, since algae form in rainwater tanks after a few days, which makes the water smell lazy. With the Rainfresher, the water retains its perfect quality.

Flow cells Flow cells with built-in pro aqua diamond electrodes are suitable for the treatment (disinfection, COD reduction) of various (waste) waters

Dez-i-Des-100

Wastewater disinfection system for the disinfection / sterilization of biologically pretreated sewage water from decentralized objects (alpine huts, protective huts, mining estates)
