Size of company: L

Field of activity: Green Efficiency

Section:

We are experts in highly developed compressor technology.

SSecop Austria GmbH, founded in 1982 as a "compressor Oe" based in Fürstenfeld, manufactures hermetically sealed compressors for household refrigeration units. The production site relies on many years of experience in the development of state-of-the-art compressor technologies for household chillers.

Using our highly developed manufacturing technology, we set European standards in quality and performance and provide reliable efficiency in all areas. The know-how and the competence of the research and development team enable product innovations which significantly contribute to the increase in customer service.

Close cooperation with market-leading customers opens up new perspectives and allows us to be a reliable supplier of powerful compressor solutions.

Fürstenfeld, also called "Thermenhauptstadt", is the heart of the Thermenregion Styria. With 6,000 inhabitants, it is surrounded by 6 surrounding thermal spas in the region. The city is located in the Hügelland of East Styria, 150 km from the Austrian capital Vienna and only 15 minutes from the Hungarian border. The landscape around Fürstenfeld is often referred to as "Styrian Tuscany" due to the numerous grass and arable land. The mild climate makes the

Styrian region one of the most fertile countries in Austria.
