Winners of the last years

Quelle: Katharina Stögmüller

The award "Environmental and Energy Technology" stands for outstanding projects in the area of environment, energy and resources. In a total of three categories, committed companies are invited to submit their innovative projects, products and services from the different disciplines.

The selection of the nominations and award winners is made by an independent expert jury.

The nominees and award winners are awaiting a high-caliber award by three federal ministries and the opportunity to signal their innovative power and to develop a model for further developments.

In 2008, 11 projects were nominated from over 60 submissions, from which the state prizes were then determined. In 2010, the number of submissions already rose to more than 80 projects from which the jury nominated 12 and selected the three state sponsors. In 2012, the jury, with approx. 200 projects see more than double the number of projects, including the submissions for the first-ever special award "Start-Up Resource Efficiency".

On the following pages you will find detailed information on the award winners of the last years.
